

Wednesday 25.3.20 - Maths

Starter.

Look around your home.
What has the biggest capacity (what holds the most)? Bath, sink or cupboard.

Wednesday 25.3.20 – Maths

LO I can estimate and measure the volume of different containers.

Volume is the amount of space that a substance or object occupies.

Find a way to measure containers in your house. You could even use a 500ml drinks bottle to measure them.

Draw the table on the following page in your books.

Now chose 4 containers. Estimate and then measure how much liquid they can hold.

How accurate were you? What is the difference between estimate and actual measure?

Container type	Estimation of volume of water held ()	Actual volume of water held ()	Difference between my prediction and actual amount ()

How accurate were you? What is the difference between estimate and actual measure?
