

Extreme Earth- Monday 11th May

Our Geography this week is all about the Earth.

We are going to find out about the Earth beneath our feet, volcanoes, earthquakes and tsunamis.

Structure and composition of the Earth

The Earth is almost a sphere. These are its main layers, starting with the outermost:

- **crust** (relatively thin and rocky)
- **mantle** (has the properties of a solid, but can flow very slowly)
- **core** (made from nickel and iron)

These two video clips will help you find out about the structure and composition of the Earth.
