

Thursday 18th June

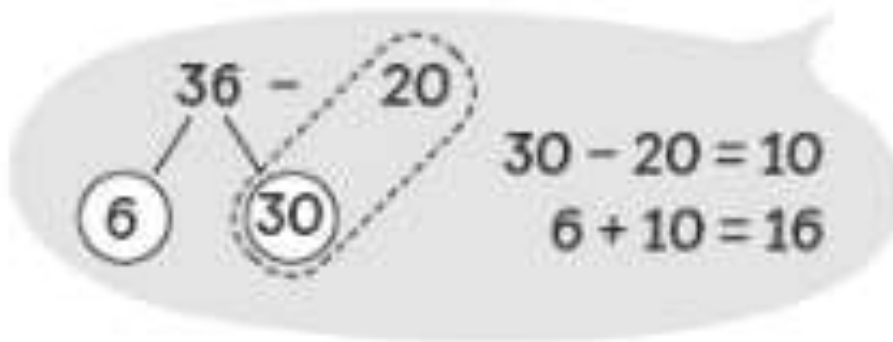

I can mentally subtract 2, 2 digit numbers.

Let's subtract $36-16$ again.

Is there another method we can use?

Discuss your new method with your adult and jot it down.

Subtract tens.

$$36 - 20 = 16$$

Jack partitioned 36, he took away the tens. Then he recombined the tens and ones.

- Now try this method using the worksheet.
- You can also try the next worksheet using the column method. Do you remember practising this last term?
