

Tuesday 16th June

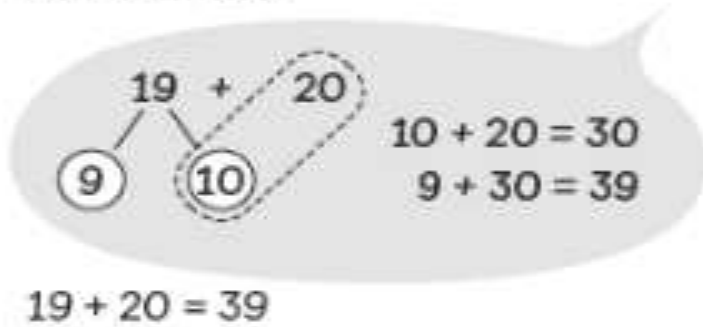

I can mentally add 2 2digit numbers

Let's take away 36-16 again.

Is there another method we can use?

Discuss your new method with your adult and jot it down.

Add the tens.

Tom has partitioned 19. He added the tens. The answer he got, he then added the ones.

Now practise this method with $40 + 25$. Talk through the steps with an adult as you go.

Now try this method using the worksheet.

You can also try the next worksheet using the column method. Do you remember practising this last term?
