

Wednesday 24th June

I can subtract multiples of 10 from 3 digit numbers.

There were 658 children at a concert.
40 left the hall during the interval.
How many children remained in the hall?

Explain how you would work this out. You could draw pictures.

Do you remember the counting back method when subtracting 2 2 digit numbers?

Do you think this would work? Why?

Discuss with an adult.

Count back in tens from 658.

$$658 - 40 = 618$$

658, 648, 638, 628, 618

Use the picture and explain the method.

Where did he start?

How many tens did he count back?

Have a go at the worksheet.

Have a go at the challenges.
