

Thursday 9th July

I can make and evaluate a product using recycled plastic.

Which came first?

Answers to yesterday's question. Well done!

1826 Matches (friction)

1922 Guitar pick

1948 Barcode

1954 Lego bricks

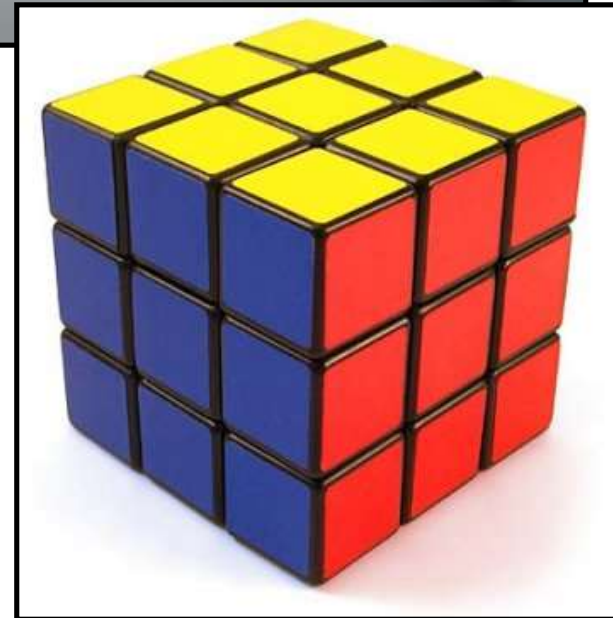

1958 Chupa Chups lollies

1976 I love NY t-shirt

Which came first?

Arrange these products into the order you think they were invented in...

Chewing gum
Push pin
Duracell AA

Rubix Cube
Fortune Cookie
Post-It notes

Look at your design.

How would you cut or shape the plastic that will suit your design?

Is there anything you would like to add to your design?

Would you like to use a softer type of plastic?

Now use your design to make your product.

Remember!

What the product will be used for.

Who is going to use the product.

Keep changing and making your product better as you go. It doesn't have to be exactly like your design!

If you're not finished today, you can carry on tomorrow.

Question to ponder once completed.

Did the product suit the purpose? What would you change?
